CAS INDEXING IS AVAILABLE FOR THIS PATENT.			

AB The present invention relates to methods and compositions for the treatment of body weight disorders, including, but not limited to, obesity. Specifically, the present invention identifies and describes genes which are differentially expressed in body weight disorder states, relative to their expression in normal, or non-body weight disorder states, and/or in response to manipulations relevant to appetite and/or weight regulation. Further, the present invention identifies and describes genes via the ability of their gene products to interact with gene products involved in body weight disorders and/or appetite and/or body weight regulation. Still further, the present invention provides methods for the identification and therapeutic use of compounds as treatments of body weight disorders. Additionally, the present invention describes methods for the diagnostic evaluation and prognosis of various body weight disorders, and for the identification of subjects exhibiting a predisposition to such conditions.

L9 ANSWER 67 OF 76 USPATFULL on STN

ACCESSION NUMBER: 2000:1698 USPATFULL
TITLE: Desaturase antigen of mycobacterium tuberculosis
INVENTOR(S): Jackson, Mary, Paris, France
Gicquel, Brigitte, Paris, France
PATENT ASSIGNEE(S): Institut Pasteur, Paris, France (non-U.S. corporation)

	NUMBER	KIND	DATE

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to the **isolation** of a new gene, **des**, which encodes a M. tuberculosis protein named DES. The **des** gene appears to be conserved among different Mycobacteria species. The amino acid sequence of the DES protein contains two sets of motifs that are **characteristic** of the active sites of enzymes from the class II diiron-oxo protein family. Among this family of proteins, DES shares significant homology with soluble stearyl-ACP **desaturases**. DES is a highly antigenic protein, which is recognized by **human** sera from patients infected with M. tuberculosis and M. leprae but not by sera from tuberculous cattle. Thus, the DES protein provides a useful tool for the serodiagnostic analysis of tuberculosis.

L9 ANSWER 68 OF 76 USPATFULL on STN

AB The preparation and use of nucleic acid fragments encoding fatty acid **desaturase** enzymes are described. The invention permits alteration of plant lipid composition. Chimeric genes incorporating such nucleic acid fragments with suitable regulatory sequences may be used to create transgenic plants with altered levels of unsaturated fatty acids.

L9 ANSWER 69 OF 76 USPATFULL on STN

ACCESSION NUMBER: 1999:27456 USPATFULL
TITLE: Pheromone **desaturases**
INVENTOR(S): Knipple, Douglas C., Geneva, NY, United States
Roelofs, Wendell L., Geneva, NY, United States
Miller, Stuart J., Geneva, NY, United States

PATENT ASSIGNEE(S): Cornell Research Foundation, Inc., Ithaca, NY, United States (U.S. corporation)

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention is directed to **isolated** membrane-associated acyl-CoA **desaturases** expressed in the pheromone gland of an insect and, in particular, the **.DELTA.11 desaturase** of *Trichoplusia ni*. The present invention further relates to an **isolated** DNA molecule encoding the T. ni **.DELTA.11 desaturase**, expression vectors comprising the DNA molecule, and host cells comprising the expression vectors. Methods for **isolating** DNA sequences of homologous acyl-CoA **desaturases** expressed in the pheromone glands of insects are provided. The use of these acyl-CoA **desaturases**, DNA molecules, expression vectors, and host cells to produce an unsaturated fatty acyl-CoA product from a saturated or unsaturated fatty acyl-CoA reactant is also disclosed. The unsaturated fatty acyl-CoA products are useful as pheromones or as pheromone precursors as well as in the preparation of organic molecules, such as drugs.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A composition which comprises **human** mesenchymal stem cells which have the potential to differentiate into cells of more than one connective tissue type and a composition which induces cells from the mesenchymal stem cell population to differentiate into the adipogenic lineage, and a process for inducing such differentiation. The composition for inducing such differentiation comprises a glucocorticoid and a compound which stimulates cAMP production or inhibits cAMP degradation (such as a phosphodiesterase inhibitor). The process can further include **isolating** the adipocytes from remaining hMSCs.
